

EYE TEST CHART

- Print the chart at 100% on A4 paper (Landscape).
- Fix the chart somewhere convenient, at your normal reading distance. (Usually about 14" or 35.5cm).
- If you are already wearing glasses, please remove them.
- Wait a moment for your eyes to adjust, then read down the chart below from top to bottom.
- When the text becomes difficult to read, note the dioptre value on the right. If in doubt, choose the higher value.
- The dioptre value indicates the approximate strength of the lens that you require.
- This chart is offered as a rough guide only to aid you in the selection of items from our range.
- You are advised to follow your optician's prescription if you have one as it will be more accurate. Ask them for it.
- For the sake of your eyes, there is no substitute for having regular tests performed by a suitably qualified optician.
